## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 6-9 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by NOZAKI et al.

The claimed invention is drawn to positive photoresist composition comprising a resin which has an ester group represented by the following general formula (I-2) in its molecule and is decomposed by action of an acid to increase solubility of the resin in an alkali solution, and a compound generating an acid by irradiation of an active light ray or radiation: wherein R21 to R24, which may be the same or different, each represents a hydrogen atom or an alkyl group; and m represents 1 or 2.

NOZAKI et al anticipates the invention at Example 66 wherein a copolymer made from 2.-methyl-2-adamantyl methacrylate and  $\alpha$ -acrylic acid-(R)-(+)- $\beta$ ,  $\beta$ -diethyl- $\gamma$ -butyrolactone. This copolymer in the photoresist composition clearly anticipates the claimed invention at claims 6-9 and 20.
